About me

Cybersecurity Automation Engineer at Telefónica Tech. I consider myself a proactive person, with a great work ethic and good social skills. I specialize in automation-driven processes, leveraging DevOps best practices and modern cloud environments.

Education

- 42 Madrid - Fundación Telefónica**, BS in Computer Science Sept 2023 – Now
- **Coursework:** C/C++, Git, Operating Systems, Virtualization, Networking, Containerization, Web development
- Tech University**, Master in full-stack web development Aug 2022 – July 2023
- **Coursework:** Web fundamentals, HTML5, CSS3, UI/UX, MERN stack, CI/CD

Experience

- Cybersecurity Automation Specialist**, Telefonica Tech Dec 2024 – Now
- Automated response to security incident, reducing manual intervention by 70% through Torq.io workflows.
 - Developed Python and Bash scripts to streamline repetitive SOC tasks.
- Data Manager**, eFlow Consulting Jan 2018 – Dec 2021
- Data management through the reception of information, digitization and supervision of documents within the file management system.
 - Software used: Excel, Power-Point, Word.

Certifications

- Associate Cloud Engineer**, Google Cloud Platform Nov 2024
- University expert in cloud architecture**, Tech University Jan 2024

Projects

- HTTP Web Server** github/webserv
- Developed an HTTP/1.1 server capable of processing configuration files similar to Nginx, handling basic routing, request management, CGI execution and cookies.
 - Stack Used: C++, Makefile, Docker, DevContainers
- Service orchestration using Docker** github/inception
- Developed a container-based infrastructure by deploying and managing services such as Nginx, WordPress, MariaDB, Adminer, FTP, Redis and Grafana. Optimizing scalability and efficiency through an internal network.
 - Stack Used: Docker, Docker Compose, Bash, Makefile
- Bash replica** github/minishell
- Developed a recreation of GNU BASH 3.2 that supports redirections, pipes, single and double quotes, environment variable expansion, some built-in commands and signals.
 - Stack Used: C, Makefile, Bash

Technologies

Languages: C, C++, JavaScript, TypeScript, Python, Bash

Infrastructure and Cloud: Linux based systems, Git, Docker, VirtualBox, Google Cloud Platform

Web Frameworks: React.js, Node.js, Express.js, Nest.js, TailwindCSS
